

Installing Flashing to Keep Cats From Climbing Trees located within a Purr...fect Fence Enclosure

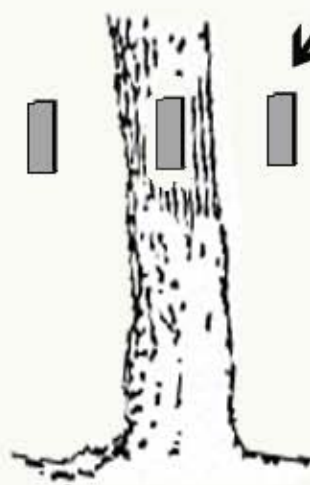

Flashing is a smooth, thin metal material that can be purchased at most hardware stores and can be used in preventing cats from climbing any trees located within a Purrfect Fence enclosure. The flashing should be placed at least 5 1/2' above the bottom of the tree. It will prevent a cat from being able to climb the tree, as the flashing is too slippery and they cannot dig their claws into it in order to climb.

1

3' Tall Flashing

Wood Blocks

(Nail to tree - This prevents Flashing from suffocating tree's growth.)

2

Screw flashing material into Wood Blocks.
